SUMMARY

Software developer with a foundation of 11 years in civil engineering, including a decade leading projects and teams in Angola. On returning to Portugal I moved into software with no coding background but real curiosity about how the engineering tools I used daily were built, completing a postgraduate degree and shipping a live production platform within two years. I bring systems thinking, stakeholder management, and engineering discipline to writing clean, maintainable software.

EXPERIENCE

Full-Stack Developer — MyNook.social (personal project, sole developer) - **SERVER DOWN PERMANENTLY** *March 2026 – Present*

- Designed, built, and deployed a live, full-stack social networking platform end to end, from domain modeling and layered architecture (SOLID, dependency injection) to cloud deployment.
- Implemented authentication and security hardening end to end: JWT access/refresh tokens, 2FA (TOTP), role-based access control, account lockout, email verification, rate limiting, and audit logging.
- Built moderation and administration tools (user management, content reporting, image moderation, account suspension), real-time notifications, multilingual support (3 languages), and automated GDPR-compliant data retention and account-deletion services.
- Maintain the platform in production as a continuously evolving project, with service-layer unit tests and a containerized deployment on a cloud Linux host.

Tech: ASP.NET Core, C#, PostgreSQL, Next.js (React, TypeScript), SignalR, Docker / Docker Compose, Cloudinary, xUnit.

Software Developer (Freelance) *June – July 2025 · Coimbra*

- Built a holiday-management web app for a local company, replacing their manual Excel-based leave process, with role-specific dashboards for employees, managers, and administrators.
- Delivered as a fully tested, documented, containerized application exposing validated REST endpoints.

Tech: Java (Spring Boot), React, PostgreSQL, Docker; tested with JUnit, Mockito, Postman.

Civil Engineer *2011 – 2023 · Portugal & Angola*

ANGOLA

- Led a 15-person team resolving residents' post-handover issues in a rehabilitated housing development: on-site diagnosis, repairs, and weekly consolidated reporting.
- Supervised public works projects (including schools): on-site supervision, technical reports, and direct liaison with government authorities.
- Managed procurement, stock control, and logistics of construction materials at scale, optimizing usage and reducing waste.

PORTUGAL

- Produced specialty engineering projects for residential buildings (water, drainage, structural) using engineering design software.

EDUCATION & CAREER TRANSITION

2023–Present — Full-time career transition into software development through a postgraduate program, self-directed learning, freelance work, and ongoing personal projects.

Data Science & Analytical Intelligence — IEPF, Coimbra *April – July 2026*

Data preparation and modeling, Power BI / Power Query, interactive dashboards, and an end-to-end analytics project on real-world data.

Postgraduate — Switch Dev — ISEP, Porto *Oct 2023 – Jun 2024*

- Java / Spring Boot: from basics to advanced.
- Design, patterns and architecture: OOA, OOD, OOP, DDD, ORM, SOLID, GRASP, and Onion.
- QA: TDD with JUnit and Mockito.
- Databases: relational modeling and SQL.
- DevOps: Git / GitHub, Docker, and Jenkins.
- Front-end: basics of HTML, CSS, JavaScript, and React.
- Agile methodologies: Scrum with 2–4 week sprints.
- Capstone — SmartHome: a team project (10 people) run as a product backlog, applying the above.

BSc in Civil Engineering — IPC, Coimbra *2007 – 2011*

SKILLS

Backend:	C#, ASP.NET Core, Java, Spring Boot
Frontend:	TypeScript, JavaScript, React, Next.js, Angular, HTML, CSS
Databases:	SQL, PostgreSQL, MySQL
DevOps & Tools:	Docker, Jenkins, Git / GitHub
Data:	Python, Power BI, Power Query
Languages:	Portuguese (native), English (professional), French (intermediate)
